The most common use of ObjectARX is to write AutoCAD-specific custom data types (XML) to the XML configuration. This allows programs to write their own AutoCAD extensions that can be either read by AutoCAD or written directly to the XML configuration. The XML configuration file (eXtensible Markup Language) is a standard text-based file format used by Autodesk CAD products. The XML can be used for performing various tasks including adding tools and layers and controlling the rendering of the drawing. For example, the XMLElement class is used to add objects to the XML configuration. A class can be written and compiled into an AutoCAD extensibility project, or a developer can use the code directly in the application. Actions ObjectARX provides APIs for programming and scripting in four areas, Data Manipulation, Data Transformation, Data Visualization and Data Editing. It also has an OLE wrapper for AutoCAD so that it can be used with other applications.
