In both cases, the user holds the key, for example by hitting the Tab key on a keyboard or pressing the Enter key on a standard keyboard. Other windowing systems Other windowing systems that include some form of key sequence identification include Microsoft Windows (80286 and newer versions) and macOS (10.4 and newer versions). Windows NT, Windows CE, and Windows Server 2000 (versions 4, 5, and 2000) also use a similar key sequence to unlock the feature. An application running in a windowed system without keys or another form of input identification will still respond to keyboard commands, including releasing a key (such as pressing the Escape key) or a menu option. Microsoft Windows On Microsoft Windows operating systems, the system is able to identify the state of the keyboard and interpret the key sequence (usually involving Alt+Control+Delete, but sometimes also Option+Shift+Esc and/or Control+Alt+Del). Linux Linux operating systems such as OpenSuse and Linux Mint use another system to identify the state of the keyboard (typically using the X Window System) and interpret the key sequence (e.g. using XF86LaunchWM). AmigaOS The AmigaOS operating system also uses a key sequence to identify itself. Usage Workstation By default, all keyboard sequences in the Windows operating system are mapped by default to the "Windows" key, so one can use it as a shortcut for application launching. For example, if one types Win+C, the windows key is pressed, followed by the letter c; this will launch the Windows Command Line. Some users use the Windows key as a shortcut to programs. For example, the "Taskbar" is invoked by default when the Windows key is pressed; one can assign a new shortcut to the 3da54e8ca3
