Today, AutoCAD is one of the most popular commercial CAD software applications in use. It is a high-end tool used by architecture, landscape architecture, interior design, mechanical, civil engineering, and manufacturing professionals. It has been installed on more than 1 billion desktops in over 100 countries and is one of the top revenue-generating applications in the world. Diverse Roles CAD is used to create and modify drawings that depict the three-dimensional (3D) physical layout of an object (such as a house, a bridge, a building, or a ship), as well as the two-dimensional (2D) graphical aspects (such as line width, line color, line style, line texture, fill color, and fill texture). A CAD drawing typically consists of several 2D and 3D views. A view represents a section of the drawing space and is similar to a page in a book. Views are modified in the drawing space in a manner similar to drawing on a piece of paper. CAD can be used to create technical and architectural drawings, as well as to make building and landscape plans. It is also used for generating production-related drawings that help the manufacturer perform the work, such as engineering and architectural models, plumbing and piping plans, technical specifications, and equipment diagrams. In addition to the traditional design-related uses, AutoCAD is used to make and edit installation and maintenance plans and specifications, create blueprints for manufacturing, produce technical data for equipment and machinery, and create maps and other geographic design work. CAD draws are created in the drawing space and used by other drawing programs and by AutoCAD itself to generate the files that the user can send to a print shop, an architectural rendering program, a laser printer, or a manufacturing company that will perform the work specified in the drawing. Features AutoCAD is offered as a desktop, web, and mobile application. The latest version of AutoCAD, 2017, is available for the Microsoft Windows platform and includes capabilities for Windows and Mac operating systems. AutoCAD is designed to run on desktop computers with a display, a mouse, and a graphics controller such as the video card. AutoCAD is also available for mobile devices, with a version that runs on iOS and Android devices. The AutoCAD 2017 app includes the following capabilities: Rendering and 2D drafting, 2.5D modeler, and 3

C++, Visual LISP, and ObjectARX can be accessed through AutoLISP. VBA can be accessed through VBA. Visual Basic and Visual C++ can be accessed through Visual LISP. For Windows software, AutoCAD and Draw can be used to create MS DOS programs using the Auto-LISP language. AutoCAD was originally developed in a Windows environment, and uses an ODBC driver to communicate with the program's native data sources, such as a database, spreadsheet or the DOS operating system's data files. AutoCAD 2011 contains an AutoCAD Server, which uses the Microsoft SQL Server to store its data. This newer format supports customization and automation. AutoCAD 2010 and earlier did not include OLE, AutoCAD's primary drawing export format. It was added in AutoCAD 2011. AutoCAD LT AutoCAD LT (a.k.a. AutoCAD Express, LT, and AutoCAD Lite) is a low cost version of AutoCAD, and can be installed on Windows or Mac. It does not support 3D drawing features, it only supports 2D drafting. AutoCAD LT can be used to create 2D drawings and import them into other CAD programs such as MicroStation, MicroStation 360, MicroStation MESS, Revit Architecture, BIM 360, ArchiCAD and ArchiCAD Mobile. AutoCAD LT requires an internet connection in order to connect to Microsoft SQL Server. In order to do this, the AutoCAD LT Express Server requires an internet connection or a local server with a web browser. If the local server is used, it will display the following website: This website can be used by a local user to login to the computer to obtain an authentication code. This authentication code is then used to log in to the computer's web browser. The web browser will display the following website: The web browser will automatically redirect the user to the Microsoft SQL Server management console page. After the authentication code has been entered, the web browser will automatically open the SQL Server Management Studio (SSMS) with the following options: Additional instructions can be obtained from the SSMS Help. In order to receive a password

for the web browser, an Internet connection is required. Mac OS X AutoCAD LT, along with AutoCAD Classic, requires Mac OS ca3bfb1094

The invention relates generally to a method of processing plants, such as corn, for use in the production of foodstuffs. More particularly, the invention relates to a method of processing corn which yields an improved food product. There is a continually present demand for foodstuffs that are high in fiber content and low in fat content. This is particularly true of food products of the starch type, such as corn, rice, and potatoes. To meet this demand, the food industry has traditionally employed a number of techniques to remove the fat from the starch. One of the traditional methods has been the use of the gelatinizing process. The gelatinizing process involves the heating of the starch, either in dry form, or when wet, to a temperature of about 185xc2x0 F. (85xc2x0 C.) and subsequently transferring the starch to a holding tank while maintaining this temperature for about 30 minutes to 3 hours. Subsequently, the starch is cooled to about 85xc2x0 F. (30xc2x0 C.) and the starch is gelatinized in a normal cooking process. Thereafter, the starch is xe2x80x9cbreadedxe2x80x9d in a continuous cooker. The starch is then transferred to a cooking vessel and is heated at temperatures of about 145xc2x0 F. (63xc2x0 C.) to about 180xc2x0 F. (82xc2x0 C.) to provide a cooked food product which has a starch of gelatinized granules or swollen starch granules. This traditional gelatinizing process can be used to produce cornstarch which can be used to produce a variety of foodstuffs, such as, for example, bread, grits, cookies, and other food products. In addition, this process produces cooked cornstarch which is low in fat and which is free of gluten, and which can be used for making gluten-free foodstuffs. The application of the gelatinizing process to the foodstuffs is limited because the gelatinization of the starch takes a relatively long period of time, i.e., about 30 minutes to 3 hours. In addition, there is
